SUMMARY

Senior Product Designer with 6+ years in B2B SaaS, specializing in design systems and enterprise UX. I deliver end-to-end solutions, from research through prototyping, in close partnership with engineering and product, to design products people trust to get the job done.

SKILLS

Design Systems, AI-Assisted Development, Front-End Collaboration (HTML/CSS), Interaction Design, UX/UI, Human-Centered Design (HCD), WCAG/A11y, Graphic Design

TOOLS

Figma, Claude, HTML/CSS, GitHub, Adobe Creative Suite, Jira, Pendo

EXPERIENCE

Bitsight — Senior Product Designer

Sep 2022 – May 2024

- Designed and drove adoption of a design token system for Bitsight's design system, creating a single source of truth for all product teams.
- Owned the integration of core ThirdPartyTrust features into Bitsight after the merger: mapped workflow divergences, designed missing components, and extended the design system to support a unified experience.
- Led knowledge-sharing sessions to onboard the design team onto the new token system, and provided ongoing design feedback in weekly critiques to raise consistency and craft across the team.
- Prototyped an AI-agent workflow at an internal hackathon that automated SOC2 report analysis for the questionnaire review flow; the concept was carried forward into a production feature.
- Partnered with engineering, project management, and Customer Success to validate designs and align on the roadmap, balancing user needs with technical constraints.

ThirdPartyTrust — Product Designer

Feb 2020 – Sep 2022

- Built ThirdPartyTrust's design system from 0 to 1: defined component architecture, naming conventions, and usage guidelines, creating the scalable foundation adopted by the product team.
- Led the end-to-end redesign of core platform features, reducing user-reported confusion and improving task completion.
- Defined user stories and acceptance criteria that bridged product, design, and development teams around shared objectives.
- Instrumented the platform with Pendo, tagging key user flows and building in-app guides that improved onboarding completion and reduced reliance on support.

Entornos — UI Designer

Aug 2018 – Feb 2020

- Shipped and maintained HTML/CSS templates and front-end customizations for Moodle-based enterprise platforms across banking, healthcare, and education clients, adapting user flows and visual systems to each brand's identity and functional requirements.

- Designed a Netflix-style learning experience for a major Argentine bank, enabling employees to access and upload role-specific content company-wide and improving knowledge sharing at scale.

Earlier Career — Graphic Designer

2007 – Present

- 15+ years as a graphic designer across brand identity, editorial, and motion, including UI systems for casino and slot machine software at Sielcon S.R.L. (2007–2012). This foundation in visual systems thinking underpins the design systems work done today.

SIDE PROJECTS

- Designed and built a personal portfolio site (hanielbaiz.com) end-to-end through AI-assisted development with Claude and GitHub Pages, shipping the front-end code directly and documenting the workflow as an in-progress case study.

EDUCATION

Universidad de Buenos Aires — Professional Degree in Graphic Design, 2003 – 2014

Coderhouse — UX Design, 2017
